

The Profile of the Montana Native American, in its' updated version, is the conglommeration of the efforts of many people. While it would be impossible to name all of the persons responsible for the compilation and subsequent publication of the Profile, the office of the Coordinator of Indian Affairs has tried to make reference to all the agencies involved in the process in either the Source listing or the Guide to Publications portion of the book.

When a people, such as Montana's Native Americans, are capsulized and analyzed in order to come up with the statistical data contained herein; we sometimes have an almost clinical view of the persons described. This is most certainly not our intention. As stated in the Profile's introduction, this update's material was compiled so that organizations dealing with Montana's Indian populace have a data base to define needs and allocate resources. The raw numbers and statistical analysis is only representative of a particular segment of Indian people under very specific criteria. While the data is representative of these things, it is by no means the "sum" of Montana's Indian people. Just as Montana's Indians are unique from the rest of her population, so are the individual Indians within Montana unique in their own right.

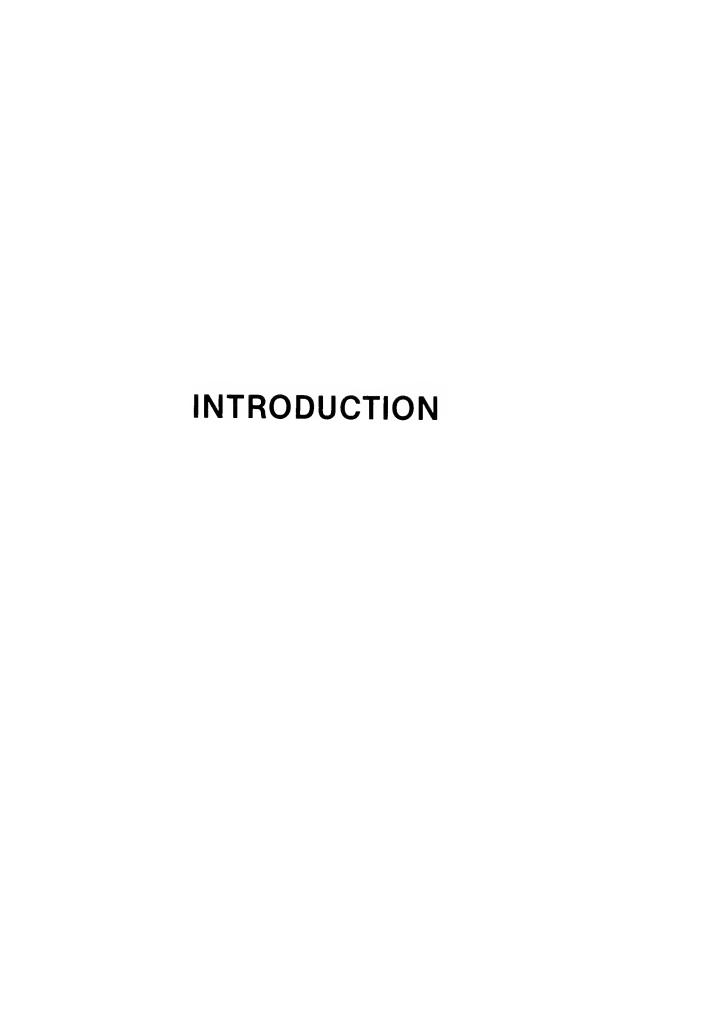

We, the staff of the Office of the Coordinator of Indian Affairs, are very proud of The 1980 Profile of the Montana Native American and we hope that those persons who use the materials contained herein are able to do so with great success. The data included in this publication is material reflective of the early 1980's and is therefore applicable as current data regarding Montana's Native American populace. We sincerely hope that the information contained in the Profile can be used to the advantage of Montana's American Indian people.

ABOUT THE COVER:

The cover of the 1980 Profile of the Montana Native American was designed by Cheryle Zwang. Cheryle is a Blackfeet Indian from Browning, Montana. The cover is representative of several things to Montana's American Indians. The circle indicates the "circle of life". Indian people understand the cyclical nature of life. This is most directly related to the seasons. The feather in the picture is representative of the Eagle. The Eagle is respected and honored by all the Plains Indian tribes and the four dyed horsehair clumps that hang from the feather represent the four colors that are symbolic of the four directions. Four is a significant number to the Montana tribes: there are four seasons, four directions, etc. The color White represents the North where the snow comes from, the color Red represents the West where the sun sets, the color Yellow represents the East where the sun rises, and the color Blue represents the South where it is warm. (In some of the Plains tribes, Black is used as the fourth color rather than Blue.)

INTRODUCTION

The Native American Profile was first prepared for the Office of the Coordinator of Indian Affairs in 1974. This Profile of the Montana Native American is designed to update statistical information and data on the socioeconomic status of the Montana Indians and to document the extent of their participation in government service programs since the Profile's first publication.

Comprehensive and usable statistics on the socioeconomic status of Native Americans have been generally unavailable. This is particularly true for data on geographical areas such as states, counties, and cities. Nationwide statistics, while available and aggregated at summary levels, do not provide insights into varying conditions between states or reservations, nor do they allow comparisons between off and on-reservation Indians. Particularly in urban areas where no Federal agency has assumed a service responsibility for Indians, there is little or no published information on the status of the urban Indian.

The lack of available data is a serious problem. Decisions (revenue sharing allocations, grants, and budgets) affecting the flow of funds to Indian people are based upon statistics relating to the size and characteristics of the Indian population. Indian organizations need an adequate and uniform data base to define needs and allocate resources. Comprehensive baseline data are required for evaluation of overall progress of Indian people. Knowledge of the degree of program services to minority groups is dependent upon good program reporting of racial characteristics of participants. At best, these decisions are made on the basis of broad generalizations, or with specific program-generated data useful only in a very limited context.

For these reasons, the Governor's Coordinator of Indian Affairs in the State of Montana contracted with Ms. Denise Rodriguez to publish the this handbook of statistics relating to the Montana Native American. The project for the update of the <u>Profile</u> was funded completely by the office of the Coordinator of Indian Affairs. The data compiled under that contract are contained in the tables following this introduction.

Based upon the experience and research of Ms. Rodriguez and the staff of the Coordinator of Indian Affairs (Donald L. Clayborn, Coordinator; Ms. Cheryle C. Zwang, Asst. Coordinator; Mr. Gary Kimble, previous Asst. Coordinator, Ms. Jeanie Horne, previous Secretary; Ms. Roxie Helm, temporary staff member who put the <u>Profile</u> on disks for us), an extensive and thorough state and nationwide search was conducted for data relating to Montana Indians. Agencies were identified as probable sources and subsequently contacted. Countless individuals in numerous state and Federal agencies were interviewed during this process, and a wealth of published and unpublished data collected.

Data Collection Limitations

Despite the major effort described above, the <u>Profile</u> does <u>not</u> contain <u>all</u> statistical information available on Montana Indians. Because of <u>Iimited</u> resources, only the most accessible sources could be utilized. The following practical guidelines were followed in the preparation of the <u>Profile</u>:

- -- With the exception of the Urban Indian Alliances, local government agencies or programs were not contacted directly. Only sources capable of providing data from all areas of the State were utilized. Thus data may be available from local reservation agencies, units of government, or Indian programs in specific geographic areas that may not be included in the Profile.
- -- Financial resources were not available to utilize special data processing programs to access information stored in computers. On some occasions, computer-generated statistics were provided for the Profile at no cost and are included in the tables.
- -- Statistics are constantly changing. Even when available, historical data were not included for reasons of space. Therefore, the Profile cannot be used to establish trends, except as the data included in this update relates to the initial publication's data.
- -- Special studies or surveys were not reported in the Profile, except if they provided statewide information, or were the only source of data relating to a special subject. There have been numerous studies and surveys in Montana. However, most are quite dated and/or restrict coverage to a specific geographic area. Studies not utilized, but relevant to Montana Indians, are listed in the Guide to Publications appendix of the Profile.
- -- Some relevant information may not be included in the <u>Profile</u> because we were unaware of it. There is not centralized source for information on Indian statistics. Most of the effort for the <u>Profile</u> relied on personal referrals or references in literature. Some officials interviewed may have been unaware of data collected in their agency. In other cases, officials may not have wished to release the data.

Availability

Despite these limitations, the <u>Profile</u> is, in our estimation, the most extensive and comprehensive presentation of statistical information on Indian people for one state. Although we were concerned at the beginning about the availability of data (particularly for urban areas),

the actual data uncovered exceeded our expectations. Racially-specific data are gathered regularly by most State and Federal agencies. However, in many instances, only those agencies are aware of the data or they are published in a form very specific to each agency's purposes. By probing into the unpublished files or data collection instruments, more detailed information, useful for other purposes, was found.

Sources of Socioeconomic Status Information

There are three major sources of statistical information regarding the socioeconomic status of Montana Indians.

The 1980 U.S. Census provides the most comprehensive data on the status of American Indians in Montana. The Census is based on a 100% sample of the entire population for a few general items, with 20%, 15%, and 5% samples for most characteristics. Data on basic demographics, educational levels, employment, income, and housing are collected. Though there is much disagreement over the actual population counts of Indian people as reported by the Census, the Census is very useful and the most accepted data source for describing socioeconomic characteristics. The Census can be used to document the comparative status of Indian people. Though the 1980 Census total count of the Montana Indian population may not be accurate, there is no evidence to suggest that this inaccuracy invalidates the basic Indian population characteristics as reported in the Census. For that reason, whenever appropriate, the Profile reports Census data in percentages, rather than the actual Census numerical count.

Most published Census reports contain racial data for only the Negro and Spanish-surnamed ethnic groups. Published data are generally tabulated on a statewide basis only, with occasional urban/rural and specific reservation distinctions. Special computer tapes are available for purchase from the Census which provide more racial and geographic detail of Census data than published reports. The Profile utilized special computer tabulations from these tapes prepared by the Billings Area Office of the Bureau of Indian Affairs and by the Department of Labor in Washington, D.C. These tabulations provided much of the data on urban Indians.

The Indian Health Service and Montana Department of Health and Environmental Sciences both gather data on the health and vital statistics of the population. The Department of Health and Environmental Sciences collects all information contained on birth, death, marriage, and divorce records, as well as for certain reportable diseases, in every county in the State. Race is indicated in the records of these vital events. Most of the information is stored in a computer, and thus the basic records for Indian vital events are intact.

Included in the <u>Profile</u> are data generated from these records in the form of unpublished computer printouts which are used in preparing the Department's annual publication - Montana - Vital Statistics.

The Indian Health Service reports service data for the reservations and adjacent communities. From this data, comparative levels of incidence of disease may be inferred. The Indian Health Service in Washington, D.C. also makes special compilations of data from the State records described above. These compilations are published in the regular report, Indian Health Trends, of the Indian Health Service.

Other sources of data relating to socioeconomic status include the urban Indian Alliances, the U.S. Department of Labor, and the U.S. Equal Employment Opportunity Commission.

Sources of Indian Participation Data

Most governmental agencies can estimate the service population of major ethnic groups participating in their programs. However, these data are contained in a variety of reporting systems at different governmental levels, and are not always complete or available for substate geographical areas. Certain Federal agencies - Agriculture, Office of Education (HEW), and the Social Security Administration - have good equal opportunity reporting systems. Others, particularly in health and veteran's service programs, have little data on minority participation.

Participation in special governmental projects in Montana is not reported in the <u>Profile</u> unless those projects operated on a statewide basis. The projects are usually short-term in nature with little impact on the Indian population.

Comparisons and Conclusions

The <u>Profile</u> contains a wealth of information concerning Montana Native Americans. These statistics can and should be used for a variety of purposes: to support grant applications, to assess the need for services, to indicate and investigate problems in service delivery programs, and to allocate resources. Many of these purposes will involve comparisons of data for Indians and non-Indians. For that reason, the tables have been arranged so interracial comparisons can be facilitated. In addition, comparison among similar data elements from different sources are possible.

However, these comparisons must be made with good consciousness of the limitations of the data. The <u>Profile</u> contains tables with data from several sources. Each source will use different definitions, and have methods of data collection of varying quality. Time periods for the data are different. We have noted these factors when appropriate for each table. Users of the <u>Profile</u> should utilize the data with a full understanding of those factors.

The Office of the Coordinator of Indian Affairs has refrained from any comment or analysis of significance of the data contained in the <u>Profile</u> except for the issue of Indian population estimates. The <u>Profile</u> is organized in such a fashion that conclusions and analyses are the reader's prerogative, not that of those who gathered the data.

HOW TO USE THE PROFILE

HOW TO USE THE PROFILE

Table Organization

Each table in the <u>Profile</u> is placed in one of the subject chapters, based upon the major emphasis of the data in table. Each chapter contains a listing of tables after the chapter narrative. Within each chapter, related tables are grouped together. As a general rule, tables relating to socioeconomic status appear first and those describing participation in service programs appear last.

Structure of Tables

Each table bas been arranged to facilitate identification of Indian data. Whereever possible, statewide data for <u>all</u> races are also included for comparative purposes. "All Races" data are usually presented on the left hand or top portion of every table. Indian data are usually placed on the right hand side or lower part of each table.

Source of Information

A brief indication of the source of the data is given at the bottom of each table. In addition, a complete description of the data source and methods for obtaining the data are in the Source chapter of the Profile.

Publications Listed

Certain publications are referred to throughout the <u>Profile</u>. These publications and their availability are described in the individual <u>Source listings</u>. In addition, important publications for users of <u>Indian data are listed in the <u>Guide to Publications</u> appendix at the back of the Profile.</u>

Most publications are available from the Government Printing Office (GPO) or directly from the source of the data.

Extracting Indian Data

In most tables, Indian data are presented. However, in some instances, it was necessary to utilize a broader category, called "minority" or "non-white". This category included Black and Asian-Americans as well as Native Americans. In most instances it does not include Spanish-surnamed Americans. Statewide percentages, described as "minority" or "non-white" should closely approximate the true Indian figure, as Indian people outnumber other minorities by 7 - 1 in Montana.

In cities and counties, however, this approximation may not be valid depending on the proportion of non-whites to the Indian population. The minority distribution tables in the <u>Population</u> section should always be checked for the relative proportions of Indian people to other minorities when utilizing the "minority" category for cities and counties.

Determining Enrolled/Not Enrolled, On/Off Reservation Distinctions

One of the most important purposes of the <u>Profile</u> was to distinguish the socioeconomic status and extent of service to Indian people not eligible to receive services as "legally recognized" Indians. However, very few agencies make these distinctions in their data gathering efforts. As a result, the <u>Profile</u> was able to make the enrolled/not enrolled camparisons in statewide population statistics only.

On and off reservation divisions were easier to identify, as the reservation is a clearly identifiable geographic entity. Many tables do give data for the entire state and/or specific reservations, so the off-reservation statistic is a matter of subtraction. In cases where county data is given, a problem arises when reservation boundaries cut across county lines. Thus, the percentage of Indians living within the reservation in that county must be an estimate.

Comparisons Among Races

Because statistics are not normally meaningful unless compared to other statistics, the data in the <u>Profile</u> have been organized to facilitate comparison. The most common comparison that will be made is "All Races" data compared with Indian data. Whenever appropriate, data for "All Races" is presented in the same table as the Indian data.

However, it was not always possible to present comparable data for the two groups on a substate (county or reservation) basis, except for certain tables. Our priority was to find Indian data, and substate information on whites and other races was either not always available or would have made the tables cumbersome. In most tables, however, a statewide "All Races" or "White" figure is displayed for comparative purposes.

Individuals wishing to make interracial comparisons by counties or reservations where "All Races" or "White" data were not listed in the <u>Profile</u> should inquire of the source of that table as to the availablily of such data.

In tables describing Indian participation in service programs, the reference figure to determine under or over participation is the percentage of Indians eligible to participate in that program. This latter figure was not presented for every geographical area for most tables in order to streamline the <u>Profile</u>. However, these reference percentages can almost always be found in some other table.

Additional Data

As noted in the <u>Introduction</u>, the <u>Profile</u> did not and could not exhaust the entire spectrum of Montana Indian data available. Those with special interests in a particular subject or geographic area may wish to pursue further investigation. Such efforts will want to contact local sources, as the <u>Profile</u> authors did not contact many local agencies. In addition, the sources listed in the <u>Profile</u> may have unpublished information that was not available for the <u>Profile</u> for some reason. Special studies or surveys not used in the <u>Profile</u> may be helpful also. These are listed separately in the Guide to <u>Publications</u> appendix.

Definitions, Notations, Symbols, Abbreviations

All notations and symbols are usually explained on every table. The most common abbreviations are listed below.

. . .: Sample was too small to derive a meaningful figure.

No. - number

Pct. - percentage

- N/A not available; data either does not exist, or could not be obtained for the Profile.
 - : not applicable or meaningful.
- 0 usually means none, but in cases where a sample or percentages are used 0 could denote an insignificant number above zero.
- SMSA Standard Metrolpolitan Statistical Area: geographical area around large cities commonly used for statistical reporting. In Montana, Cascade County (Great Falls) and Yellowstone County (Billings) are the only SMSAs.
- Reservation-On Denotes data concerning Indians living or receiving service within the BIA recognized reservation boundaries. Most U.S. Census data is reservation specific, and does not include those Indians living in communities or trust land adjacent to the reservations.
- Reservation-Adjacent Denotes data from Indians living close to reservation. In most cases included by BIA in reservation service population. The definitions of adjacent in different sources vary and are noted in the source listings.
- Urban/Rural Many tables make urban/rural distinctions; most are from the 1980 U.S. Census. The Census definition of "urban" means 2,500 or more inhabitants in incorporated cities or incorporated places, and places closely surrounding these cities. The only city counted as "urban" and on a reservation in Montana would be Wolf Point, which had a 1980 population of 3,074. Hardin and Cut Bank are the only two urban areas immediately adjacent to a reservation under this definition. All other areas are defined as "rural".

Rounding Figures

Percentages are used very often in the <u>Profile</u>. In many instances, the percentage may not add up to 100.0 because of the practice of rounding off decimals.

POPULATION AND DEMOGRAPHICS

POPULATION

Statistics on the numbers and basic characteristics of the Indian population in Montana are contained in this chapter. These characteristics include age, marital status, sex, size of families, mobility and nativity. Other socioeconomic characteristics are described in other appropriate chapters of the Profile. Data relating to current vital statistics (births, deaths, marriages, and divorces) are included in the Health and Vital Statistics chapter.

Availability of Data and Sources

Estimates on the Indian population are readily available from many sources. However, much controversy reigns over the accuracy of these estimates. Figures presented in the 1980 U.S. Census have been criticized by Indian leaders for undercounting the Indian population. Yet higher estimates are not generally documented by accepted survey or estimation techniques. We discuss this issue in detail in the "Comparisons and Comments" section below.

There are four major sources of population and/or demographic data. The U.S. Census completed a universal survey of the entire United States population in 1980. Population figures and demographic characteristics for Montana are published in the U.S. Census report, General Population Characteristics - Montana. Specific Indian data were published in the Census subject report, American Indians, which reported statistics for the entire state, urban and rural areas, and Montana's five largest reservations. In addition, the Bureau of Indian Affairs in Billings has compiled special demographic analyses of the Indian population living in cities and counties of Montana, published in Indian Population and Housing Characteristics.

Census data for the Indian population were derived from questions asked of all respondents about their race. The race data represent the <u>self-classification</u> of each individual and therefore do not denote any biological or legal status. For persons of mixed heritage who were in doubt of their racial classification, the race of the person's father was used.

Not all Census questions were asked of every respondent; in addition to the basic questions asked of the universal (100%) sample, other questions were asked of individuals in sample sizes of 5%, 15%, or 20% of the entire population. The Census then inflated the data from these smaples to represent the entire population. The total adjusted population figure from these smaller samples may differ from the 100% sample total figure. In most cases, the smaller samples report a lower total Indian population figure than the universal sample. However, the percentage used in those tables are still valid, and can be applied to the 100% sample total for more accurate raw numbers.

The <u>Bureau of Indian Affairs</u> estimates its service population on an adjacent to reservation on a semi-annual basis. These figures are published in the March and September "BIA Labor Force Report." Each reservation agency estimates its service population from files, recent surveys, general knowledge of the reservation, and any other information that is available. The labor force characteristics described in the BIA Labor Force Report are listed in the <u>Employment</u> chapter of the <u>Profile</u>. The Bureau of Indian Affairs does not compile statistics on urban Indians.

The <u>Indian Health Service</u> primarily utilizes BIA data in estimating its service population. The I.H.S. service areas, however, include the entire counties in which reservations are located and, therefore, their service population figures are higher than that of the BIA. Since the basis for the BIA and I.H.S. figures is very similar, I.H.S. service population estimates are not included in the <u>Profile</u>.

Urban Indian Alliances serve Indians in seven urban areas of Montana. Most are able to make an educated guess of the Indian population in these cities. However, only three Alliances were able to document, through files or surveys, their estimates. Data from these three (Butte, Great Falls, Helena) are used in the Profile.

A special geographic compilation of tribal rolls was arranged. This compilation was intended to serve as another source of information on the Indian population in Montana. Only enrolled tribal members, based on the latest tribal roll, were counted in this special tabulation. No figures are included for the Rocky Boy's reservation as a tribal roll with addresses was not available. The numbers for Blackfeet include only adults (age 18 and over) eligible to vote in the last tribal election. Adjustments were made in the Blackfeet count to include children and an estimate of the Rocky Boy's roll was made in order to make an estimate of the statewide enrolled Indian population.

Comparisons and Comments

Population statistics are important in many ways. Government and other agencies rely upon them for decisions regarding apportionment, taxation, revenue-sharing, levels of service, and grants. Statistical levels - such as rates (of disease), percentage (of unemployment) - reflecting on socioeconomic status are based upon population figures.

Many of the differences in opinion on population counts of Indian people revolve around <u>definitions</u> and <u>methods of data collection</u>. Other important factors are <u>lifestyles</u> and attitudes of Native Americans.

The definition of an Indian is the most important factor in a population estimate — it determines who you count. There are three different theoretical definitions of an Indian — biological, legal, and cultural. The biological or genetic includes all Indians who are descended from Indian stock. A certain blood quantum may be required. The legal or administrative definition pertains only to those Indians who are eligible to receive services. The cultural definition is based upon an individual's self-identification with the aspects of Indian culture. Urban Indian Alliances tend to use a combination of the biological/ cultural definitions. The BIA uses a legal/biological combination, and the Census figures are based primarily on the cultural definition. Legal definitions tend to produce the smaller Indian counts, and a biological definition the greater.

The major sources noted above also have different methods of data collection. The Census collected information from 100% of the population - 80% by mail and 20% by direct interview, and thus had the advantage of having collected information directly from the population. The Bureau of Indian Affairs estimates the population through file counts, surveys, and other sources of information. However, BIA figures are only estimates, the quality of which may vary from reservation to reservation. Few of the Urban Alliances have collected data through file counts and surveys, but most don't even have that documentation and rely on general knowledge of their area and the utilization of Alliance services.

Indian people are generally mobile, which also causes great problems in estimating the population. Some Indian Alliances estimates that their population may increase substantially in the summer, due to seasonal migration. For this reason, it is hard to determine the "permanent" Indian population of any place in Montana. The 1980 U.S. Census counted individuals at their usual place of residence, but seasonal migrants were counted at their actual place of residence on April, 1980. Both BIA and the Urban Alliances attempt to estimate the "permanent" population of their respective service area.

Another problem, primarily affecting the Census, is the rural, isolated nature of the homes of many Montana Indians. Addresses are often unavailable, and unless an interviewer is extremely familiar with the reservation, he or she will have a difficult time locating households. Though the Census did employ local, and sometimes Indian, interviewers, Indian households were probably missed. Another factor affecting the Census survey is the general anti-survey attitude of Indian people. Indian people have been studied and surveyed for years, and view additional surveys with skepticism. Interviewers of Indians are generally aware of the difficulties due to this attitude.

According to the 1980 census (Table A-14), there were 37,153 American Indians in the state of Montana. Because of the problems discussed previously in the profile, this figure is not thee definitive population statistic of Montana's Indian populace. The office of the Coordinator of Indian Affairs estimates that the Indian population within the state of Montana is approximately 45,000. This figure is one which those agencies dealing in Indian affairs agree with. For the purpose of this update it, and the related statistical data included in the profile, shall be considered reflective of this group. This estimate is not offered as a final resolution to the population controversy, but reflects our judgement after reviewing and studying the data.

TOTAL AND AMERICAN INDIAN PERSONS FOR IDENTIFIED RESERVATIONS AND IDENTIFIED TRIBAL LANDS - MONTANA, 1980 Table A-5

(Corrections to the 1980 census counts of the total and American Indian populations which were made after the final census tabulations were completed are reflected in the data for reservations; "All races" counts for the United States and States do not include these corrections. For meaning of symbols, see Introduction. For definition of terms and corrections, see Definitions and Explanations and Limitations of the Date, respectively)

WELFARE AND INSURANCE

WELFARE AND INSURANCE

This chapter contains tables concerned with Indian enrollment in governmental insurance and public assistance programs. Programs such as food stamps, commodities, BIA General Assistance, welfare cash assistance, Medicaid, Medicare and Social Security are described.

Not included in this section are other programs which might be considered welfare-linked, or have eligibility criteria based on income levels. Education, health and employment programs with these characteristics are included in their respective sections of this Profile.

Availability of Data

The government welfare and insurance programs have been responsive to a recent emphasis on the need for data on minority participation in Federal service programs. In most programs, racially-specific data are available for the state, counties, and reservations. In some cases, (Medicaid, Social Security, disability insurance) county data were either unaccessible or not sufficiently large to warrant reporting.

Sources

The Montana Department of Social and Rehabilitation Services (Division of Economic Assistance) administers the food stamps, commodities, public assistance and Medicaid programs. County data are compiled and summarized for all these programs except Medicaid. Medicaid data are available only for the State, as county claims data are on record but not tabulated. Program administration of the adult categories of public assistance (elderly, disabled, and the blind) was transferred to the Social Security Administration effective January 1, 1974.

Other Social Security programs are administered by the <u>Social Security Administration</u> in Baltimore, Maryland. Racial groupings used by SSA are white/black/other. For some SSA data, black and other were reported to gether as non-white. In these tables, "other" can be estimated to be the Indian population, except for certain counties (see the chapter, <u>How to Use the Profile</u>, for problems in estimating Indian data from broader racial groupings.)

Comparisons and Comments

Care should be taken in making comparisons of Indian participation in these welfare and insurance programs with participation of non-Indians. Certain demographic characteristics are different for the Montana white and Indian populations that may affect eligibility for these programs. Family size, presence of male head in household, and age distribution are important factors in determining eligibility. Reference to other tables in the <u>Profile</u> will provide the demographic data helpful in making such comparisons.

Type of Program

Racial Category

Food Stamp	Food Distribution	Grand Total		dispanio rigin		American	
			White	Black	Hispanic	Indian/2	Asian/3
44,542	2,260	46,802	32,940	180	659	12,317	706

^{1/} The required reporting of data annually by household instead of persons starting with the April 1980 period has resulted in procedural delays. This change has made it necessary to convert household data to persons for this reporting period only.

- 2/ Includes Alaskan Native.
- 3/ Includes Pacific Islander.

HEALTH AND VITAL STATISTICS

HEALTH AND VITAL STATISTICS

This chapter is concerned with the health status and vital statistics of Montana Indians. Statistics on marriages and divorces, births and death, incidence of disease and mortality rates are included in this category.

Availability of Data

In most cases racially-specific data were available for statewide and county geographical areas. Tables present births, deaths, marriages, fetal deaths and infant deaths by county, with rates calculated for comparisons with rates for the total population.

There are less data available on the incidence of disease and causes of death for Indians, particularly in cities and counties. Though data on deaths from county or reservation-specific statistics are keypunched on IBM cards, resources were not available to compile such data. Furthermore, the smallness of the numbers involved might question the validity of county data. However, the number and types of health problems reported to Indian Health Services facilities can be used to infer the relative health problems of reservations, and are presented in this chapter.

Data ; regarding health services to Indians was limited to the number of outpatient services provided by the Indian Health Service. Figures for service provided by <u>private</u> health care providers to racial groups are not available. Reimbursable services under Medicaid and Medicare are included in the <u>Welfare and Insurance</u> chapter in the <u>Profile</u>. Information from various health care projects funded in Montana (WICONI, Community Mental Health Center, C & Y projects, etc.) was not included in the Profile because of its limited and special nature.

Sources

There are two major sources of health and vital statistics for Montana Indians. The Bureau of Records and Statistics in the Montana Department of Health and Environmental Sciences collects and compiles data from county records and marriages, divorces, births, deaths, and morbidity (incidence of reportable diseases). Racial data are recorded so there is a good data base for compilation of health and vital statistics for specific racial groupings. The Bureau has facilitated compilation by recording the data on IBM cards from birth and death certificates for computer storage. The Bureau annually published a report, Montana — Vital Statistics, which contains summaries of statewide data, some of which are racially-specific. Additional unpublished computer printouts and worksheets are available for more racial and geographical detail. All the raw data collected by the Bureau is also forwarded to the

National Center for Health Statistics of the Department of Health, Education, and WElfare, in Washington, D.C.

The <u>Indian Health Service</u> (I.H.S.) serves the Native American population living on or adjacent to reservations. As a practical matter, any Indian with a "link" to a reservation will receive service at an Indian Health Service facility, even if he or she lives beyond the service unit geographical boundary. Montana is part of the Billings service area of the Indian Health Service, which also includes the Wind River reservation in Wyoming. The Indian Health Service does compile statistics on services rendered and conditions to eligible Indians treated both at I.H.S. facilities and non-I.H.S. health care providers (under contract to I.H.S.) for each reservation service unit.

The Office of Statistics in the I.H.S. Washington, D.C. office also receives data from the National Center for Health Statistics on all vital events involving both urban and reservation Indians in the 24 states with I.H.S. facilities. From this data, the I.H.S. compiles and publishes national health and vital statistics for all Indians living in those 24 states.

Comparisons and Comments

For comparative purposes, statewide data for all races were included in the tables. In addition, two tables comparing Indian and non-Indian health and vital statistics for selected counties and cities were developed for direct comparisons of health status.

The statistics in this chapter are based upon the <u>place of residence</u> of the person involved, not by the <u>place of occurence</u> of the event. Thus, out-of-state Indians who list Montana as their place of residence are included in these tables.

The population figures used in deriving birth and death rates are either 1980 U.S.Census figures or Indian Health Service population estimates. To the extent that these estimates are inaccurate, so are the rates in these tables. The rates are also affected by the size of the population base. In counties with a small Indian population, an abnormal occurence of one or two events will skew the rate substantially. For these reasons, rates should be utilized with knowledge of the population base.

EMPLOYMENT

Tables in this chapter contain statistics relating to employment of Montana Indians. Data of this type include employment status (employed, unemployed, etc.), distribution of workers among industries and occupations, and characteristics of work (type of employment, salary levels). Finally, the level of manpower, training, and counseling services to the Indian population is described.

Availability of Data

Racially-specific data in the employment field are readily available on a statewide basis. However, data for substate areas are not usually published and are difficult to locate, with the exception of the Billings and Great Falls areas which receive special attention because they have been designated as Standard Metropolitan Statistical Areas (SMSAs). Reservation data were primarily obtained from Indian service agencies, and county data in these tables came from special Census tabulations for the Profile. As a result of these efforts to probe the substate data within the various agencies, conclusions can be deduced on varying employment conditions within the state.

Minority employment in government offices in Montana is generally presented by agency on a statewide basis. Statistics on minority employment in schools by district and also for the University of Montana were available and are included. Data for other Montana institutions of higher education were not available.

Membership in unions and apprenticeship programs is analysis for the state. Indian enrollment in specific manpower and training programs was also available, though, off-reservation data are sometimes unreliable.

Not included in this group of tables is information on minority enrollment or participation in programs sponsored by these government agencies and schools (except for manpower programs as was just noted). Such data are included in the appropriate chapters of the <u>Profile</u>.

Sources

There are five primary sources for employment statistics.

The <u>Bureau of Indian Affairs</u>, compiles a semi-annual labor force report which outlines the employment status of the seven Montana reservations.

In addition, BIA employment assistance and adult vocational training program data for each reservation are collected.

The 1980 U.S. Census gathered specific data on employment status, characteristics of work, and distribution of employment. The Census Bureau published this data for the Indian population in Montana as a part of their subject report, American Indians.

The Equal Employment Opportunity Commission (EEOC) is responsible for monitoring and enforcing affirmative action programs among private employers and unions in the United States. Through surveys of major employers, the EEOC reports on the status of minority participation in industries and occupations for states and metropolitan areas. Statistics are not available for specific employers, as Federal law prohibits disclosure of such information. As a result, tables using EEOC data in the Profile may not include all firms in all industries and metropolitan areas.

The <u>Department of Labor</u> funds most of the public manpower projects in Montana. A centralized reporting system requires data on racial participation in these programs. However, reporting is lax in many program areas, and the statistics of evaluation and operational reporting systems are often inconsistent. Particularly in some off-reservation programs, not all projects report this information and therefore we did not have this data. On-reservation data were provided by the Office of Manpower of the Montana Intertribal Policy Board and can be considered complete.

The Montana Department of Employment Security operates area employment offices throughout Montana. Statewide data on unemployment insurance claims for these offices are tabulated for non-white claimants. Employment services to minority groups is also tabulated for each E.S. area office.

Comparisons and Comments

As comparisons among tables will illustrate, there are conflicting data on employment status and minority employment in industries and occupations. Different data collection techniques and definitions of the sources involved are partly responsible. However, varying time periods and different geographical areas are additional factors.

LOCAL ESTIMATES OF RESIDENT INDIAN POPULATION AND LABOR FORCE STATUS: January, 1983 - INTRODUCTION Table D-18

Coverage: The term "resident Indian" means Indians living on Federal reservations or nearby who are considered part of the service population of the Bureau of Indian Affairs. The term "near reservations" is defined in CFR 25 par. 20.1 (r). Special legislation governs eligibility in Alaska and Oklahoma. In Alaska the figures include all Alaska Natives, i.e. Aleuts, Eskimos, as well as Indians. Since very few are actually living on reservations, the term "nearby" refers to all the rest of Alaska. In Oklahoma, the area covered encompasses former reservations. Thus, in both states the Bureau's responsibility extends almost entirely to the total Indian population of those states.

The statistics complied herein refer basically to the population of a geographic area; they do not necessarily refer to tribal membership. These latter figures are maintained by the individual tribes according to their specific rules of membership, which may include members wherever they may be living. The few cases where membership rather than residency was used are so indicated in the appropriate table.

In certain instances the figures for individual Reservations are higher than the figures shown in the 1980 census for the counties where these reservations are located. Some of the reasons for these differences are: (1) the tribes may have included in their count members that have left the reservation on a temporary basis (students, employment, etc.); (2) or, as stated above the tribes may have included tribal membership in their count; (3) possible variance of tribal population counts among tribes residing in the same county; and (4) not all members may have been counted in the 1980 census. Consequently, in this report the total Indian population in some States differs somewhat from the 1980 census. In addition there has been a slight increase in the Indian population since the census was taken.

The total of approximately 755,000 Indians covered in these tables represents over half of the total Indian population of the United States, which in the 1980 U.S. census numbered 1,421,367. This figure includes 42,162 Eskimos, and 14,205 Aleuts. The remainder consists of members of Federally recognized tribe, or those who claimed Indian ancestory. The above census count differs slightly from that reported by the census initially. The change reflects correction of errors found after the advanced census reports were prepared.

Estimated Figures: The local Agency offices of the Bureau of Indian Affairs estimate the data using whatever information may by available for the reservation.. Accuracy varies from place to place; it is relatively high at small, isolated locations where everyone's activity

is common knowledge. On the other hand, the labor force status can be difficult to estimate for Alaska, Oklahome, and the Navajo reservation where Indians are scattered over enormous geographic areas. Household surveys of labor force status are conducted but infrequently because of the considerable cost that such a procedure involves.

Labor Force Status: Considered in this category are all those 16 years old and over (493,880) representing about 65% of the total population. This category is divided into three major groups for the purpose of this report—unable to work, employed, and able to work, but not employed.

- (1) <u>Unable to work</u> (column 5 and 6). The total 150,531, or 30% of those 16 years old and over, includes those who are prevented from working by attending school, caring for children, or unable to work by reasons of disability, retirement, or age. Students make up some 41 of this group. Reservations differ considerably in the proportion estimated to fall into this category.
- (2) Employed (Column 7. The total, 168,084, or 34% of those 16 years old and over includes full-time and part-time employees. Of those, close to two-thirds earn 7,000 or more (column8)—the \$7,000 figure being based on the annual income of a worker earning minimum wage. In other words, one-third of the employed are earning less than the minimum wage for a full-time job.

It could be argued that employment, excluding marginal jobs, provides a better picture of the economic health of a reservation than the total employment. As one possible index of this condition, column 9 shows the number of employed Indians earning \$7,000 or more as a percent of a labor force which is in the 16 to 65 population range (column 4 minus column 2). [NOTE: The 1981 report calculated this percentage as a function of the 16 years old and older population, including those over 65. That calculation overstated the real economic labor force and should not be compared with the similiar data in this complilation].

(3) Not employed but able to work (column 10). The total, 175,265, or 35% of those 16 years old and over, includes persons actually seeking work and those not seeking work. This distinction underlies two concepts of labor force: (a) The "potential labor force" consisting of all those 16 years old and over who are able to work, whether employed or not (column 7 and 10 totaling 343,349). Fifty-one percent of the "potential labor force" are not employed (column11); (b) those not seeking work and who are omitted from the standard Labor Department definition of labor force and unemployed. By this definition the labor force consists of columns 7 and 12, totaling 275,031 and the unemployment rate is 39 percent (column). [NOTE: Unlike the national statistics, we include persons not seeking work, because of difficulty

of estimating this group without expensive surveys. There are also problems in developing a useful concept of those seeking work in places where few jobs are available, as on many reservations. In any case, including persons not wanting work in the labor force results in a higher unemployment rate than would be found in a standard household survey.].

<u>Table Format</u>: The basic data is compiled in Table 3. They are arranged by BIA Area Offices and within Area, by Agency or equivalent unit of organization below the Area level, the Reservation, and State.

Table I and 2 are summary tables. The former shows the totals for each State. The latter shows totals for each of the areas into which the BIA is administratively divided.

Additional Comments: In the compilation of this Labor Force Report, a conscious effort was made to present as accurately as possible the resident Indian population on and near reservations. It should be noted, however, that there are problems with statistics on Indian reservations. The collection of statistics in Indian urban areas is particularly difficult since household surveys are infrequent or nonexistent. Also in isolated rural areas, it is difficult to separate the job-seekers from those not seeking jobs because there are not jobs available to draw out this distinction. Were jobs available, the unemployment rate would be somewhere between the two measures given in this report notably 39 percent and 51 percent. In either case these rates show a considerable increase (9% and 5% respectively) from the last reporting period, which is attributed to the fact that the local and regional economies have been significantly affected by national recession.

Any questions pertaining to this report should be directed to the Office of Financial Management, Bureau of Indian Affairs, Washington, D.C.

EDUCATION

Tables in this section describe the status and enrollment of Montana Indians as students or enrollees in educational institutions and programs. There are three general types of educational data:

- Educational status educational levels of the population, and percentage of young people actually enrolled in school;
- 2. Enrollment actual student enrollment in public, private, and higher educational institutions;
- 3. Achievement the intellectual and educational levels of the population, particularly as measured against some goals;

Availability of Data

There is a general wealth of educational data as a result of the unique stature the education establishment has maintained during the past twenty years. Special research, studies and programs intended to improve educational methods have been undertaken and supported by governmental funds. However, a review of educational literature over the past ten years revealed that few of these studies were useful to the Profile. Most Indian-related research has been done on a national basis, with little or no state data readily available. Particularly noticeable is the lack of data in the area of educational achievement. We could not find any such data for Indian children. Some nationwide studies are available (e.g., the Coleman report) that may have gathered data in Montana, but the raw numbers for each state are not available.

Because of the Civil Rights Act of 1964 and consequent emphasis on school desegregation, data on Indian enrollment in public schools and universities are available for each district and institution.

Statistics on educational status and levels are primarily based on Census information and Indian data are available to the extent that they were compiled and published.

Sources

There were two major sources of educational information for the <u>Profile</u>. The <u>Bureau of Indian Affairs</u> conducts and publishes an annual school census of children on Montana reservations; the distribution between public, private and Federal schools is tabulated in this census.

The U.S. Equal Employment Opportunity Commission also has compiled statistical data relevant to education and the American Indian in Montana. This table is included in this section of the <u>Profile</u>.

Comparisons and Comments

Comparison between tables in this section should be done carefully. Varying time periods for data collection and methods of data collection among sources imperil valid comparative conclusions.

OFFICE OF PROGRAM RESEARCH
WASHINGTON, D.C. 20507

HOUSING

The housing conditions and characteristics of Montana Indians are described in this chapter. Statistics on home ownership, size of households and buildings, rent and other characteristics are included. Indian ownership of household appliances and automobiles are also detailed. Participation in Federal housing and loan programs is outlined in tables at the end of the chapter.

Availability of Data and Source

Racially-specific housing data are not readily accessible, particularly for substate areas. The 1980 Census of Housing has collected the most comprehensive and complete set of statistics on housing conditions of the U.S. population. However, racial data are published only for the state and the five largest Montana reservations in two Census reports: Housing of Selected Racial Groups and American Indians. Basic ownership patterns for Indians for urban counties were described in a special computer compilation of Census data made by the Bureau of Indian Affairs. Other Indian housing data for counties or metropolitan areas were not available for the Profile, and sufficient resources did not exist for special Census tabulations.

The <u>Bureau of Indian Affairs</u> has current data on the conditions and construction of the housing stock on Montana reservations. These tables detail types of new construction and repairs as well as the sources of funds utilized for financing.

The <u>U.S.</u> Department of Housing and <u>Urban Development</u> operates a variety of subsidized housing programs. However, data on racial composition of participants in these programs are not readily available at either the regional or national offices of HUD. Apparently, racial characteristics are noted on individual application forms in most programs, but such information is not summarized.

<u>Veterans Administration</u> (VA) home and FmHA loans to Montana Indians are detailed in two tables of this chapter. Judging from the small number of loans involved, substate data probably would not be useful.

Comparisons and Comments

Statewide data for all races were included in most tables for comparative purposes, and in one instance such data are presented for counties and reservations. Direct comparisons among races may be made for the Census data. Comparisons between BIA and Census statistics may not be valid, due to the different times of data collection as well as the different method of collection.

INCOME

This chapter contains information pertaining to the sources and levels of income of Montana Indian families and individuals. Cross-tabulations are made for substate areas, as well as for sex and age groupings. In general, racially-specific data were available to present a complete, overall picture of the income status of Montana Indians.

Availability of Data and Sources

The <u>Internal Revenue Service</u> has detailed information on income, but does not cover individuals who do not file a tax return for one reason or another (i.e., low or no income families). Furthermore, no ethnic identification is made on the tax return, making it impossible to sort out Indian data. For these reasons, no IRS data are included in the Profile.

The <u>Social Security Administration</u> (SSA) collects detailed information on contributions of workers covered under Social Security and can thereby calculate earnings; SSA has one ethnic classification - minority - so earnings levels can only be estimated for the Indian population. However, SSA does not collect information on earnings over \$7,800, the maximum income limit for Social Security deductions, and persons with non-wage or salary income are also excluded. In addition, only a statewide sample of earnings records is tabulated for publication, so substate totals are not available.

The <u>U.S. Census</u> is the only survey that compiles income data for differing racial groups in Montana. Family and personal income is presented by income levels for reservations and metrolpolitan areas. Sources of income (earnings, public assistance, etc.) are also listed for the statewide urban and rural populations. Other tables outline the poverty status of Montana Indian individuals and families for reservations and counties and also describe the special characteristics of the Indian population in poverty status.

Comparisons and Comments

The Census data records income from all sources for all levels and estimates from a sample for the entire population. In general, the Census data can be regarded as a good representation of the sources and levels of Indian income in Montana.

LAND, AGRICULTURE, AND DEVELOPMENT

LAND, AGRICULTURE, AND DEVELOPMENT

The ownership and use of Indian lands is the subject of this chapter. Tables describe differences between tribal, allotted, and non-Indian ownership of trust and reservation land. Specific land and development (industrial, commercial) uses are also included. In addition, data for Federal programs serving agricultural, forest, and commercial users are presented.

Availability of Data

Racially-specific data are available only for reservation and trust lands. Off-reservation Indian statistics do not seem to exist, except for some general Federal program categories.

Sources

Being the primary source of data for Indian reservations, the <u>Bureau of Indian Affairs</u> is the only source of data on Indian lands. The <u>Bureau regularly compiles</u> statistics on the total acreage of Indian trust land, and the amount of tribal and allotted acres for each Montana reservation.

Department of Agriculture programs designed to assist land owners and users are the Cooperative Forest Management (CFM) and the Soil Conservation Service (SCS) programs. Woodland owners are eligible for Forest Service assistance if they had not received assistance previously. Agricultural operators may cooperate in the SCS program, and thereby become eligible for technical assistance. However, some SCS technical assistance is given to non-cooperators if there is a minor problem which does not require extended SCS attention. Data are presented outlining Indian participation in these programs in the State of Montana.

Comparisons and Comments

Any comparisons between reservations in this chapter should consider the history and location of each reservation and tribe. Such factors are important in describing land use.

The Montana tribes and the headquarters of their reservation are:

Reservation	Date Established	Tribes	Headquarters
Blackfeet	1851	Blackfeet	Browning, MT
Crow	1851	Crow	Crow Agency, MT
Flathead	1855	Confederated Salish & Kootenai	Pablo, MT
Fort Belknap	1888	Assiniboine & Gros Ventre	Harlem, MT
Fort Peck	1888	Assiniboine & Sioux	Poplar, MT
No. Cheyenne	1884	No. Cheyenne	Lame Deer, MT
Rocky Boy's	1916	Chippewa/Cree	Box Elder, MT

NOTE: The Little Shell Band of Chippewa-Cree is, at present, seeking federal recognition. The tribe is headquartered in Montana, but does not have a reservation, as such.

LAW AND JUSTICE

LAW AND JUSTICE

This chapter contains tables relating to the law enforcement and corrections system of Montana. Data of this type include complaints, offenses, arrests, and incarcerations.

Availability of Data

Little racially-specific data are available in this field, particularly for off-reservation Indians. Law enforcement agencies have automated most of their reporting procedures, but racial characteristics either are not collected at the time of arrest, or not included in summary reports. Furthermore, law enforcement officials are extremely sensitive about releasing data relating to their activities. This sensitivity is partly due to the need to protect confidentiality of individuals, but also the desire of some sheriffs, judges, and others, to prevent comparisons of performance. No county data were available.

Sources

The Board of Crime Control in the Montana Department of Law Enforcement and Public Safety is the centralized source for crime statistics in Montana. Statewide data on offenses and arrests are tabulated in the first table of this chapter.

The <u>Bureau of Indian Affairs</u> collects statistics on complaints and incarcerations on Montana reservations. The <u>Profile</u> tables present complaints investigated by both Federal and non-Federal law enforcement officials. Adult and juvenile incarcerations in reservation facilities are also enumerated.

Comparisons and Comments

The rates and percentages in this section should be used with caution. These tables contain statistics for one year only, and figures could vary dramatically from year to year, particularly with respect to unusual offenses.

GUIDE TO PUBLICATIONS

GUIDE TO PUBLICATIONS

Most of the data contained in the Profile are available in publications of the various agencies contacted in preparation of the Profile. These are indicated in the Source listings for each table. The major and most often used publications and sources are summarized below.

Government Printing Office

Most Federal government publications are available for sale from the United States Government Printing Office (GPO) in Washington, D.C. GPO bookstores in the West are located in Denver and San Francisco. All requests for publications must be sent to:

> Superintendent of Documents U.S. Government Printing Office Washington, D.C. 20402 (202) 738-3238

Each order should detail the title and authoring government agency of the publication. A GPO stock number, if known, should also be listed. All orders must be accompanied by payment; if the price is unknown, a letter to GPO should be sent asking the price. Orders are generally filled within 6 - 8 weeks of receipt of payment.

Bureau of the Census, Department of Commerce

The Census publishes data describing the results of the 1980 U.S. Census. Most Indian data for Montana are contained in the two publications:

> American Indians, PC (2) -1F - Price: \$2.60 Housing of Selected Racial Groups, HC (7) - 9 - Price: \$2.35

Data for the total Montana population (including some Indian data) are contained in:

> Number of Inhabitants-Montana, PC(1)-A28 - Price: \$.40 General Population Characteristics-Montana, PC(1)-B28 - Price: General Social and Economic Characteristics-Montana,

PC(1)-C28- Price: \$1.75

Detailed Characteristics-Montana, PC(1)-D28- Price:\$2.50 General Housing Characteristics-Montana, HC(1)-A28- Price: \$.65

All these publications are for sale at the Government Printing Office.

Bureau of Indian Affairs, Department of the Interior

Most data compiled by the Bureau of Indian Affairs are not published though much of it is readily available from the Billings Area Office. The Billings Area Office, through the now defunct Planning and Support Group, had made a special compilation of 1970 Census data on Montana Indians, which was published in <u>Indian Population and Housing Characteristics: Montana-1970</u>, December, 1970. More recent data is on file with the Branch of Housing office, as well as the Tribal Government Branch of the BIA Area Office in Billings. Both of these departments can be reached at:

Billings Area Office Bureau of Indian Affairs 316 N. 26th Street Billings, Montana 59101

Publications From Other Government Agencies

Those publications listed in the <u>Profile</u>, but not indicated as being available from the U.S. Government Printing Office, <u>may</u> be available directly from the issuing government agency. If not, these publications may be available in the "Government Documents" section of major libraries.

Other Publications and Studies

The following list of publications and studies is reference material utilized by the first publication of the <u>Profile</u>. Most are quite dated, but, some of the following may be helpful to readers of the <u>Profile</u> and are therefore listed below. This list is not a complete inventory of all publications or studies on Montana Indians, but only a compilation of some that may be of interest to users of the <u>Profile</u>. Especially those who do not have the first publication of the <u>Profile</u> and, therefore, may lack this particular listing. Materials for this update were pulled from updated statistical studies done by several of the same agencies listed in this section or from materials referenced in the "Sources" portion of this publication.

A Survey of College and University Programs for American Indians, Locke, Pat; unpublished paper for Western Interstate Commission for Higher Education, Boulder, Colorado, 1973.
